NowAI

Clients send photos. The entries are prepared for you. The accountant approves.

NowAI: the AI back office for Azerbaijani small firms.

Investor deck, November 2026. Draft: no product, customers or revenue yet.

SUMMARY

Books is the door and money flow is the business; Azerbaijan alone is too small.

What the newest $1B companies show

Accountants are a proven channel in rich markets. Small home markets reached $1B by owning the money flow or selling globally. Most of these companies disclose no revenue.

What NowAI does

An AI junior for accounting practices. Clients send photos on WhatsApp, the AI prepares checked entries for 1C, and the accountant approves each one. Cash comes second.

What the numbers say, honestly

Azerbaijan alone is not enough: the realistic ceiling is about $2.4M a year, and the base case runs out of cash around month 45. $1B takes 180,000 to 330,000 paying firms.

What we need

We need 1.5M AZN, about $0.9M. It is a plan. No money has been raised. 1.5M AZN carries the Base case to month 45. A further 0.31M AZN is needed by month 60 and $10M by year 5 for step 3. The first 90 days test whether practices pay.

SO WHAT Nothing is built, no practice has been asked and there is no revenue. The deck is an argument and an arithmetic check. It reports no results.

Source: NowAI financial model, 6 Nov 2026 (model); Crunchbase News, 10 Aug 2026; company figures from Bloomberg, TechCrunch and Fortune (reported). USD at 1.7 AZN per USD.

195 companies became unicorns in the first half of 2026; only Basis and Rillet sell to accountants.

Company	The job it does	First $1B	Latest value	Sold through
Rillet	AI accounting system for finance teams	Aug 2026	$1B, Aug 2026	Direct and accounting firms
Emergent	Builds apps from text (India)	Jul 2026	$1.5B, Jul 2026	Self-serve
Avoca	AI call agents for plumbers and heaters	Apr 2026	$1B, Apr 2026	Direct to owners
Slash	Business banking for niche sellers	Apr 2026	$1.4B, Apr 2026	Direct, one niche at a time
Wonderful	Customer-service agents, 35+ markets	Mar 2026	$5B, Sep 2026	Direct, with engineers
Basis	AI agents for accounting firms	Feb 2026	$1.15B, Feb 2026	Accounting firms only
Serval	AI IT service desk	Dec 2025	$3B, Oct 2026	Direct to companies
Tide	Business accounts for micro firms	Sep 2025	$1.5B, Sep 2025	Direct and partners
Lovable	Builds apps from text (Sweden)	Jul 2025	$13.3B, Aug 2026	Self-serve

SO WHAT Only Basis and Rillet use accounting firms as a channel. The others sell direct or self-serve, so the accountant route is a choice we make.

Source: Crunchbase News, 10 Aug 2026 (195 in H1 2026, against 193 in all of 2025); company figures checked 6 Nov 2026. Most of these companies disclose no revenue, so none is shown. Values reported by TechCrunch, Business Wire, Fortune, SiliconANGLE and tech.eu.

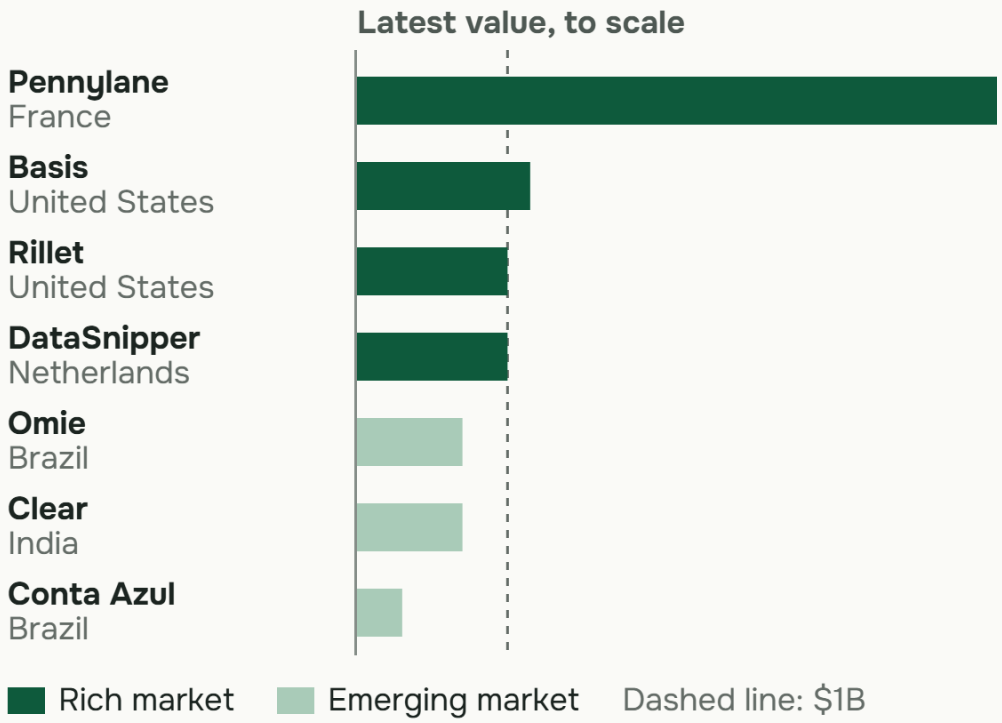

The newest $1B companies share five habits.

Habit	Evidence	What NowAI plans
1. A narrow first job	Avoca began with missed calls, Serval with IT tickets, Slash with sneaker resellers	Books starts with document intake and bank reconciliation only
2. Accountants as buyer or channel	Pennylane, Basis and Rillet. Bench, with people inside its bookkeeping, shut in Dec 2024	Sell software to practices. Never run clients' books ourselves
3. A legal push	Pennylane had French e-invoicing. Vanta had compulsory certificates	Use the yearly rule changes and e-qaimə timing as the reason to buy
4. Money flow from small markets	Uzum, Kaspi and Tabby owned it. Insider and Picsart sold globally early	NowAI Cash is second, through a licensed partner. NowAI never holds money
5. Agents need people	Wonderful had about 350 staff at $2B. DataSnipper had about 130 at $1B	Start with five, ten by year 3, and plan for more than 100

SO WHAT Habit 4 is the hard one. Nothing in our plan on money flow has been tested, and the partner's fees are not published.

Source: company reports and press, 6 Nov 2026 (reported): Bloomberg, Fortune and others; NowAI plan, 6 Nov 2026. Staff counts as reported by Bloomberg and Fortune.

Accountant-led software passed $1B in rich markets and stopped short in emerging ones.

Value and date
$4.25B, Jan 2026
$1.15B, Feb 2026
$1B, Aug 2026
$1B, Feb 2024
About $700M, 2025
$700M+, 2021
About $300M sale, 2025

Rich markets. Pennylane serves about 800,000 SMEs through about 6,000 accounting firms (reported).

Emerging markets. Omie has about 180,000 clients after about 12 years. Conta Azul sold with about 100,000 clients.

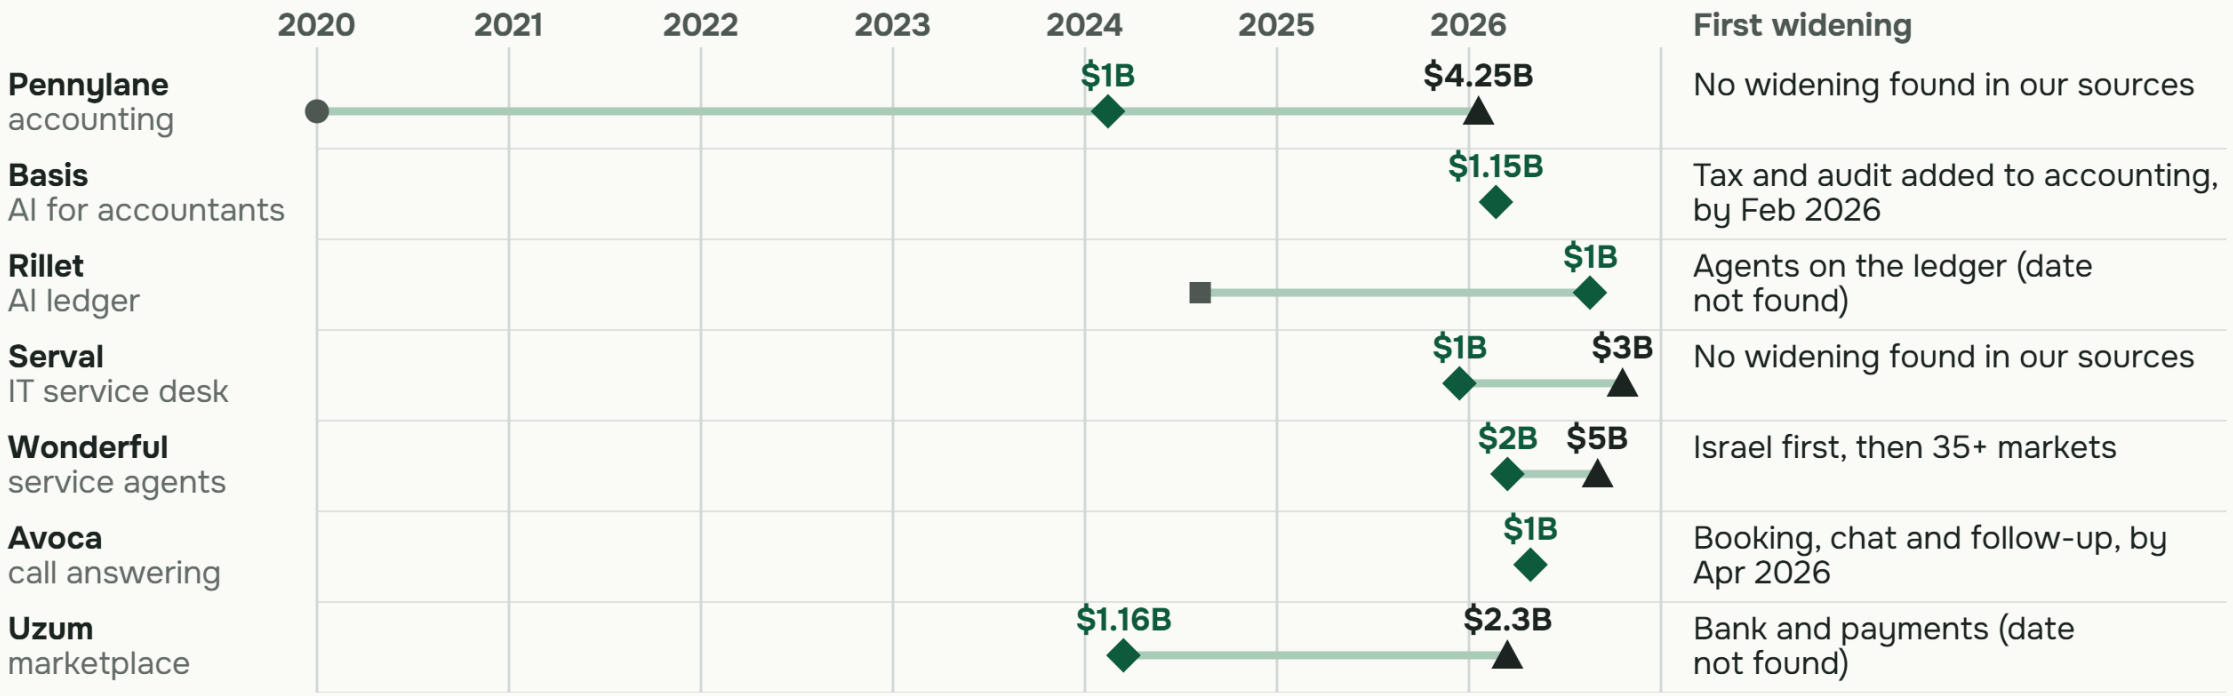

Compliance alone. Clear has had no priced round since 2021, and losses and layoffs are reported.

SO WHAT

The channel works. Software fees alone do not reach $1B in markets like ours.

Source: Bloomberg, TechCrunch and company reports, checked 6 Nov 2026. Pennylane per Bloomberg (Maddyness gives EUR 3.5B); Omie pre-money, mostly a share sale; Conta Azul price undisclosed (Bloomberg); Clear 2021. All reported. Bars to scale.

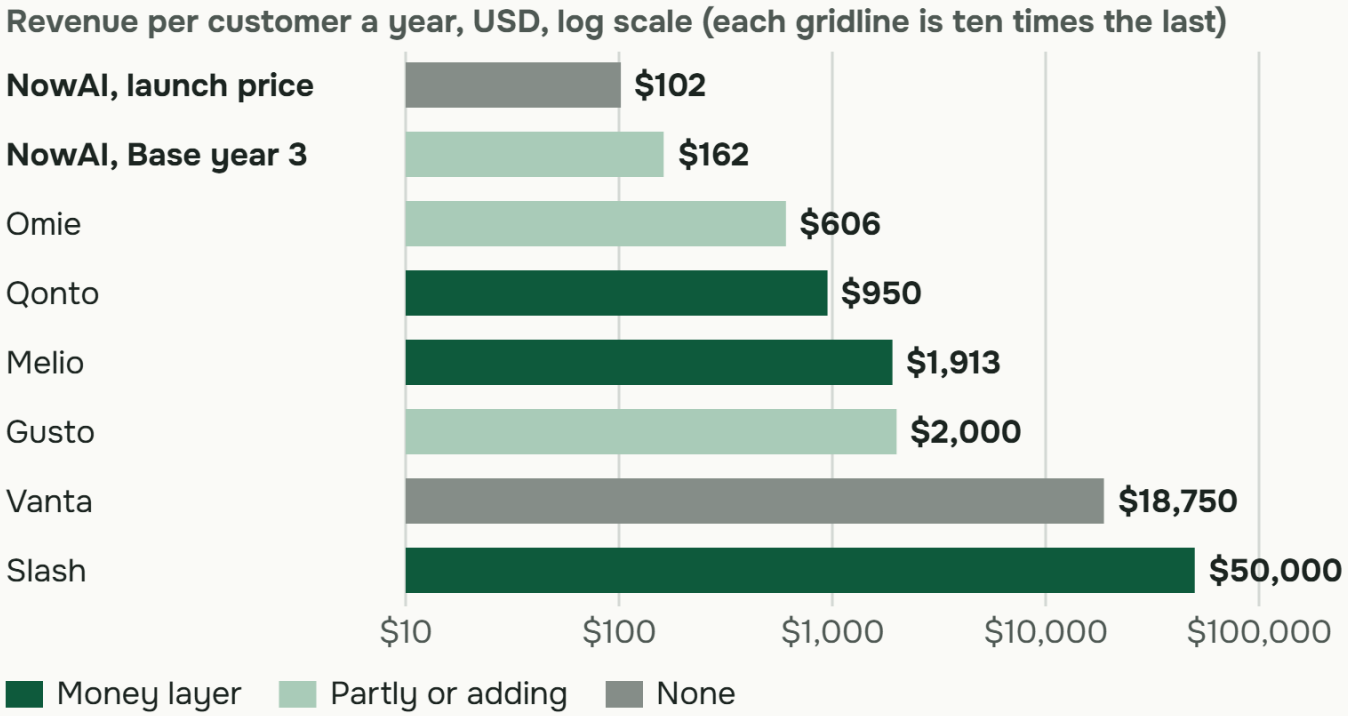

Each started with one job and added others later.

Circle: founded (Pennylane only) Square: first product Diamond: first $1B or more Triangle: latest value

Source: company reports and press (Bloomberg, Reuters, TechCrunch, Fortune), checked 6 Nov 2026 (reported). A founding year is shown only for Pennylane. Rillet sources conflict, so only its Aug 2024 launch is shown. Uzum latest is pre-money.

The smaller the customer, the more a company needs money flow.

Toast earns about 82% of its revenue from fintech and 15% from subscriptions.

Xero paid $2.5B upfront for Melio, a bill-payment company.

Counter-evidence: Vanta and Avoca have no money layer. Their customers pay far more per task.

SO WHAT

At about $100 a client a year, NowAI's plan adds a money layer only with Cash, and nothing there is tested.

Source: NowAI financial model, 6 Nov 2026 (model, at 1.7 AZN per USD); others reported, 2025 to Apr 2026. Gusto is cash collected, not ARR. Slash is CEO-stated annualised revenue; Slash customer count from one outlet. Qonto income is one French report. Toast and Melio: annual report, Xero (confirmed).

WHAT THE LATEST $1B COMPANIES TEACH US

From emerging home markets, every $1B company we found owned the money flow or sold globally.

Company	Home market	Route	Value
Owned the money flow			
Uzum	Uzbekistan, about 37M people	Marketplace, then bank and payments	$1.16B, Mar 2024; $2.3B pre-money, Mar 2026
Kaspi	Kazakhstan, about 20M	Payments, marketplace, bank	About $16B market cap, May 2026
Tabby	Saudi Arabia and UAE	Buy now, pay later	$6.5B, Sep 2026
Sold globally early			
Insider	Türkiye	Marketing software	About $1.2B, Mar 2022
Picsart	Armenia	Consumer app	More than $1B, Aug 2021

BASE RATE Alif in Tajikistan, about 10M people, was valued at about $100M in 2021 (reported). We found no Azerbaijani company at or near $1B, from a few searches, which is not proof.

Source: company reports and press (Bloomberg, TechCrunch, Fortune and others), 6 Nov 2026. Tabby value confirmed; Uzum revenue figures are company-stated and unaudited; Kaspi market cap, Insider, Picsart and Alif reported. Population figures are background knowledge.

Tested against this evidence, Cash moves up and certification moves down.

The ideas we tested	Verdict	Reason
1. Many agents, like Wonderful	Keep, as the destination	Every recent winner began with one job
2. Bookkeeping	Keep, as the first product	Accountants are the channel in three cases
3. Regulatory framework	Keep, as a feature	A deadline makes firms act; weak alone
4. Certification	Moved down: later	Weakest evidence; no $1B company on licences and permits
5. HR issues	Keep, as a later product	Real fines, but no public EMAS interface
6. Cash flow and payments	Moved up: second	Strong globally, weak locally
7. An agent that builds agents	Internal tool from about month 12	Unproven; nothing to build on yet
8. A team of 10 to 15	Right to start, wrong to finish	Smallest $1B comparable had about 130 staff
9. $1B from Azerbaijan alone	Rejected	Realistic ceiling is about $2.4M a year

Source: NowAI idea assessment, 6 Nov 2026; company evidence from press reports (reported); NowAI financial model, 6 Nov 2026 (model). Verdicts are our judgement. No customer has given feedback.

THE PROBLEM

Azerbaijan has 424,437 SMEs, but 97% are micro firms that cannot buy software one by one.

Active SMEs by size, 2024: 424,437 (verified)

Micro 410,913 (96.8%)

Small 9,737 and medium 3,787

97%

of SMEs are micro firms: 410,913 of 424,437 (2024)

About 15%

are VAT payers: 62,414 on 1 Oct 2026. The two counts use different bases

13,524

small and medium firms (9,737 and 3,787). Medium firms alone are too few to build on

Unknown

how many accounting practices and freelance accountants exist. This is the key gap

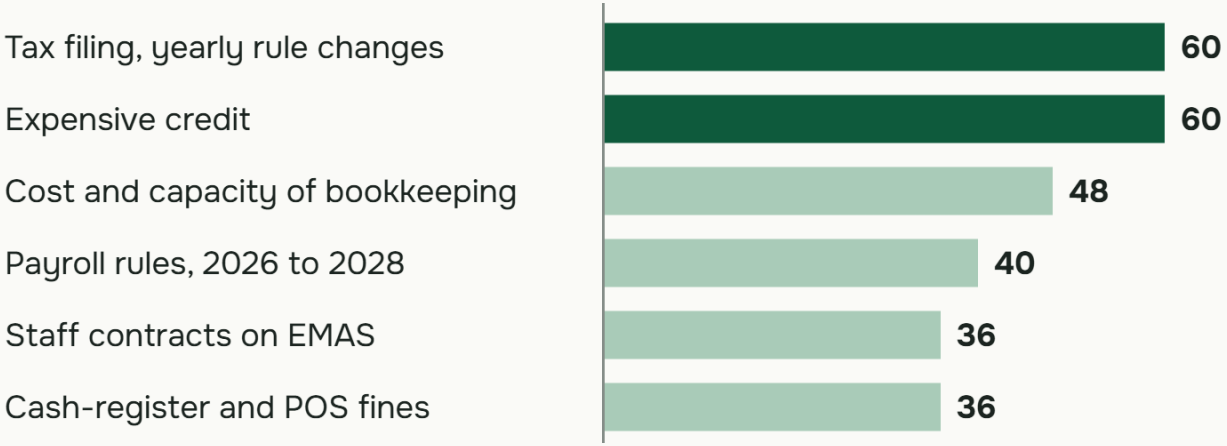

SO WHAT Selling to micro firms one by one does not pay. At the Light price of 5 AZN, gross profit is about 2.58 AZN a client a month (model). The practice is the buyer.

Source: State Statistics Committee, 2024 (micro, small, medium: reported; total verified); Trend, 1 Oct 2026 (VAT payers); NowAI financial model, 6 Nov 2026 (model). Micro share is 96.8% by our arithmetic.

THE PROBLEM

By our scoring, tax rules and costly credit hurt most; surveys do not show bookkeeping as a top pain.

Pain score out of 125 (our judgement of evidence, firms hit and money)

20,000 to 25,000 AZN

fine for a company that uses staff without an e-signed contract (reported, 2025)

1,000 / 3,000 / 6,000 AZN

cash-register fine for the 1st, 2nd and 3rd breach in a year (verified, 2026)

18.6%

average rate on new manat loans, June 2026 (reported)

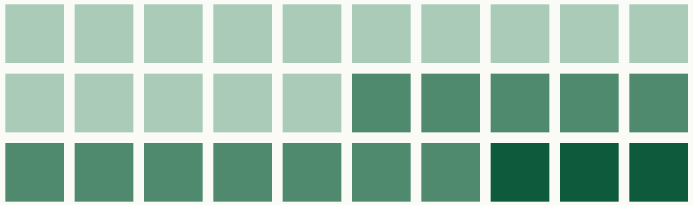

Independent review, 5 Nov 2026. Surveys do not show bookkeeping itself as a top pain. In the 2024 World Bank survey tax rates are the most-named obstacle (16.5% of 368 firms, reported) and bookkeeping does not appear. Our case rests on how SMEs buy and on yearly rule changes. The 20 interviews must confirm it.

Source: NowAI pain scoring, 6 Nov 2026 (our estimate: evidence, firms and money, each 1 to 5, multiplied); World Bank Enterprise Survey 2024 via APA; tax service booklet 2025; taxes.gov.az 2026; Trend, June 2026.

Accountants are the way in: one sale brings many clients.

One sale brings many clients

A 30-client practice pays 435 AZN a month in the model. Pennylane reaches about 800,000 SMEs through about 6,000 accounting firms (reported).

15 Light, 12 Standard, 3 Heavy

The law keeps a person in the loop

Only heads of micro and small firms and sole traders may keep their own books. Others need an accountant or outsourcer (reported, 2026).

Chief accountants must hold a certificate. We use the stricter reading until a lawyer confirms.

NowAI prepares. The accountant files under their own signature and never hands over an ASAN İmza.

Routes to practices

1C dealers own distribution and import formats. In the model they bring practices from month 13 and keep 20% (estimate).

We name 33 prospects. None has been contacted. How many practices exist is unknown.

Audit bodies number 226, but they are not the SME bookkeeping channel.

SO WHAT One sale reaches many clients, and the certified accountant stays in the loop. Nobody has been asked yet, so the number of practices is the first thing to learn.

Source: NowAI financial model, 6 Nov 2026 (model); Pennylane figures as reported in the press; taxes.gov.az and tedris.taxes.gov.az, 2026. The 30-client mix of 15, 12 and 3 is an estimate with no data.

THE PRODUCT

We found local products that do parts of the job and none that joins them up for practices.

Who	What it does	Where it falls short
The cheap human accountant	Outsourcers and freelancers, from about 100 AZN a month (thin evidence)	The real competitor: it caps what a practice pays for a tool
AI One Docs	Reads scanned invoices and turns fields into structured data	No accountant workflow, 1C posting or e-qaimə matching seen
Bitax and Complex.az	Local cloud accounting and ERP	No AI or e-invoice feature found; Complex.az AI is a claim
1C add-ons for e-qaimə	Move e-invoice files in and out of 1C	Not joined with reading and approval
GW Audit, GW Accounting	Platform from an audit firm, in development	Early stage, no clients found
State tools	e-taxes, e-qaimə and e-mühasibat: filing portals (e-mühasibat price unknown)	They file but do not book entries. The state controls data access

SO WHAT We found no product doing the whole job for practices, and each step exists somewhere. The gap is a workflow. Rivals could copy it.

Source: NowAI competitor search, as of 6 Nov 2026 (prices and AI features mostly unknown; a search result is not proof, and an absent hit is not an absent product). Complex.az details come from a vendor-affiliated blog.

THE PRODUCT

The AI junior would be built, tested, run and improved with the accountant in the loop.

1. Build (planned)

The accountant would describe how a client works and add past files. The agent would draft rules for review.

Sample moment (sample data)
Nümunə Market is set up from 6,480 past documents: 62 suppliers, 14 rules.

2. Test (planned)

Every change would run against a test set grown from accountant corrections before it goes live.

Sample moment (sample data)
Replay of October: 397 of 412 match, 96.4%. One new rule lifts it to 98.5%.

3. Run (planned)

A client photo arrives on WhatsApp. The agent would propose an entry and a reason. The accountant would approve, edit or reject.

Sample moment (sample data)
An invoice for 240.72 AZN arrives as a photo. The entry waits for one click.

4. Improve (planned)

Each edit would teach client memory. The agent would flag what nobody has tagged, such as overdue invoices.

Sample moment (sample data)
NowAI flags 18,420 AZN overdue from 6 customers, 61% of the bills due by the 20th.

SO WHAT The accountant is in the loop at every step, so a wrong entry is caught before it reaches the books. The demo uses synthetic data only.

Source: NowAI plan and backend design, 6 Nov 2026 (design, not built). Sample moments use sample data from the demo, which is synthetic; no real client or document has been used.

THE PRODUCT

Five agents on one core: Books first, then Cash.

1. NowAI Books

Launch

Answers: Bookkeeping

Build: Now. Version one: intake and bank reconciliation

2. NowAI Cash

Next

Answers: Cash flow

Build: After two checks: overdue invoices and the legal route

3. NowAI Tax

Next

Answers: Rule changes and filing

Build: When three paying practices ask

4. NowAI People

Next

Answers: HR and payroll

Build: When three paying practices ask

5. NowAI Comply

Later

Answers: Certificates and permits

Build: When three paying practices ask

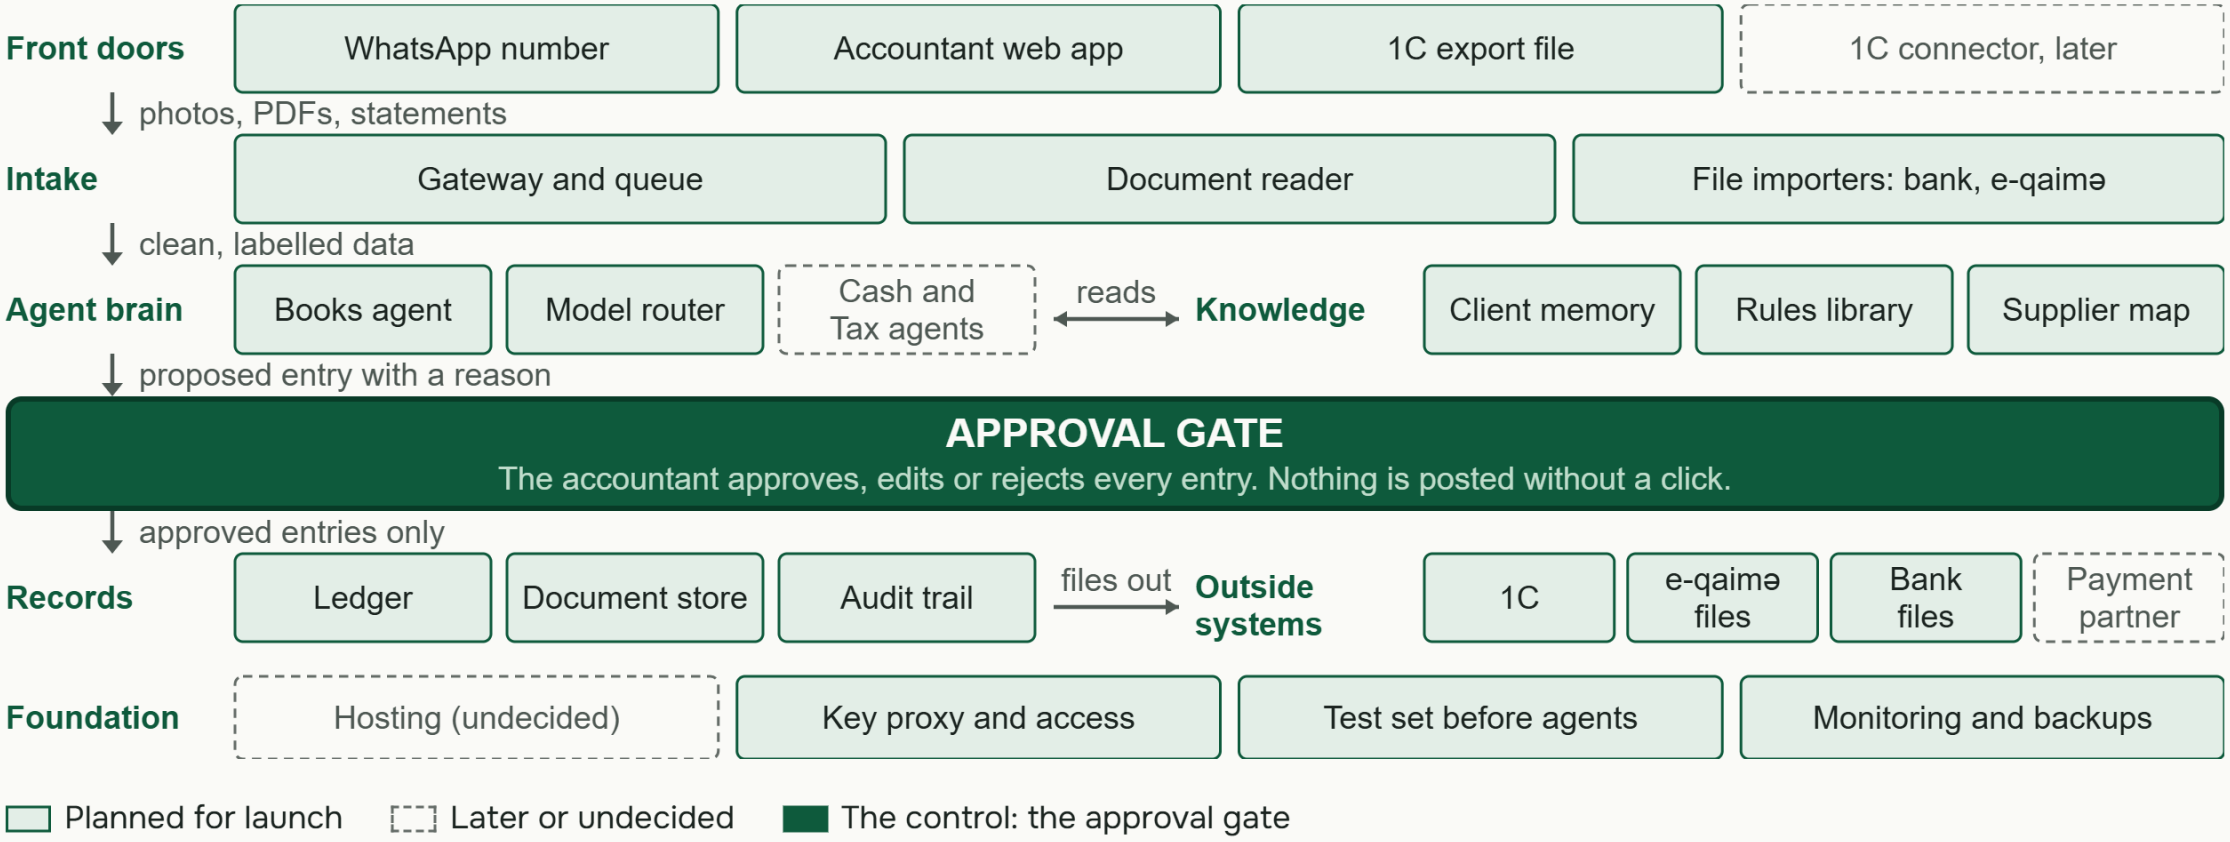

Shared core, to be built once. All five agents would run on it

Document reading in Azerbaijani and Russian. Connectors for 1C, bank and e-qaimə files. A rules and calendar engine. An approval screen an audit trail. A test set before any agent.

SO WHAT Rule of three: an agent waits for three paying practices. Cash is the exception.

Source: NowAI plan, 6 Nov 2026 (order set by the NowAI financial model, 6 Nov 2026). Agent scores and take-up are estimates with no data.

The backend: nothing reaches the books until an accountant approves it.

Source: NowAI backend design, 6 Nov 2026 (design, nothing built). Files first: no public e-qaimə, e-taxes or EMAS interface was found. Hosting is undecided and has no quote. Payment partner candidates, Epoint and Payriff, have not been contacted.

One receipt passes through nine steps, and nothing posts until the accountant approves.

1	2	3	4	5	6	7	8	9
Client sends photo	**Intake**	**Read the receipt**	**Checks**	**Propose the entry**	**Verify**	**Accountant approves**	**Post to ledger**	**Export and confirm**
1 s	1 to 2 s	3 to 6 s	1 s; 10 to 20 s if re-read	3 to 5 s	2 to 3 s	10 to 30 s of human time	under 1 s	1 to 3 s
$0	**about $0.00002**	**$0.0008**	**$0; about $0.03 if re-read**	**$0.00055**	**$0.0005**	**$0**	**about $0.00001**	**$0, or $0.0212 outside 24 h**

Design estimates. Nothing measured. The financial model plans on about USD 0.025 a document.

$0.002

a clean document (0.0034 AZN), assumed 80% of volume

$0.06

a hard or blurry document (0.10 AZN), assumed 20% of volume

2.3 AZN

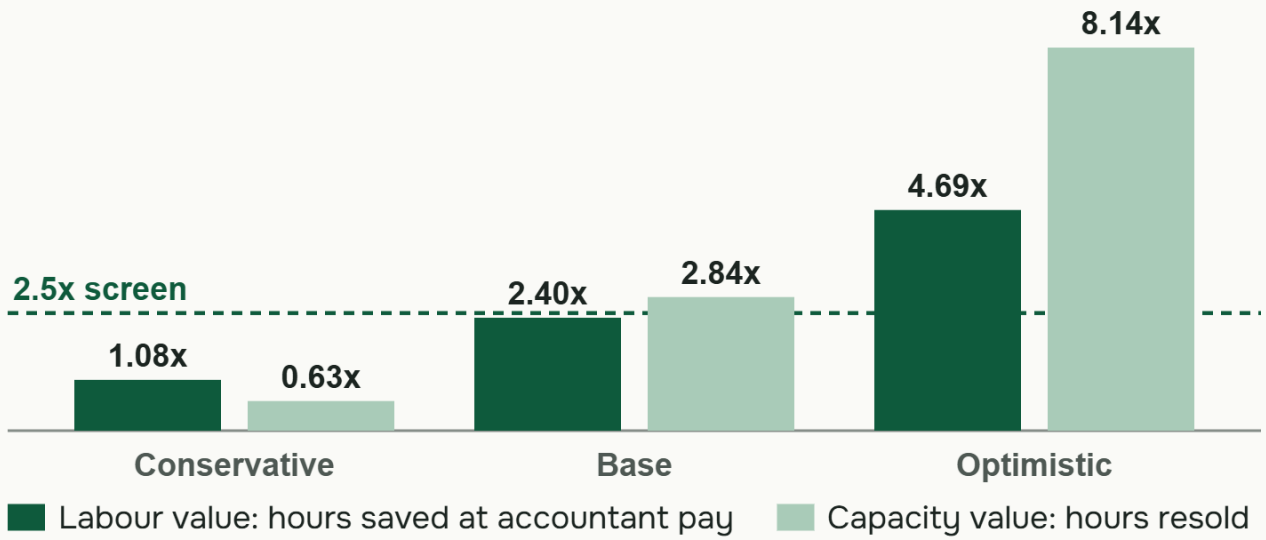

a client a month on AI and messages (design estimate)

SO WHAT Accuracy on real Azerbaijani receipts is untested. The financial model's direct cost is about 5.7 AZN a client a month, more cautious than our 2.3 AZN, and we plan on it.

Source: NowAI backend design, receipt walkthrough and cost per document (estimate, published model prices, 6 Nov 2026). Design estimate about 2.3 AZN a client a month against the NowAI financial model (Startup P&L) direct cost of about 5.7 AZN (documents 4.36, WhatsApp 0.36, cloud 1.00), which is more cautious and covers more lines. USD at 1.7 AZN.

In Base, NowAI passes the 2.5x screen on capacity only; Conservative fails both.

Value ÷ price for a 30-client practice at the launch price (model)

Base case at other accountant pay (AZN a month)

Accountant pay	Labour ÷ price	Base verdict
1,000	2.00x	Capacity only
1,200 (input)	2.40x	Capacity only
1,400	2.80x	Labour passes
1,800	3.61x	Labour passes

27.9%

of client hours saved in Base, against a 30% proof bar. Conservative saves 14.6%.

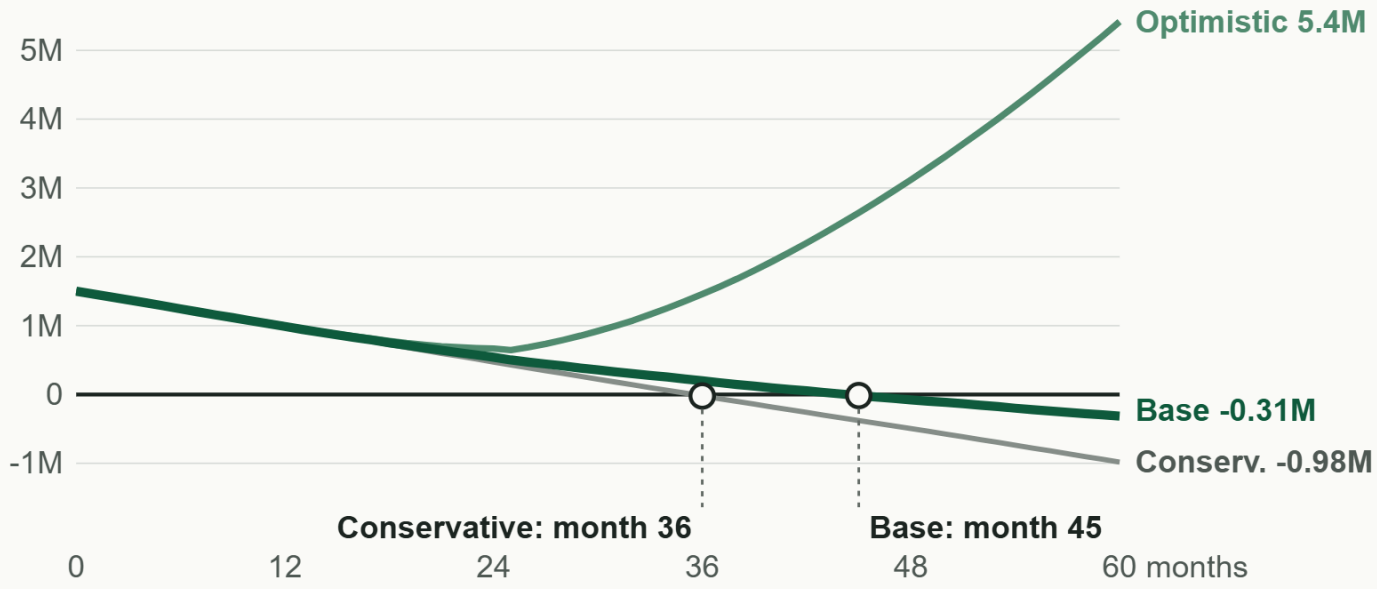

SO WHAT The conservative case fails both screens. The launch price of 14.50 AZN is above the 13.94 AZN that passes on labour.

Source: NowAI financial model, 6 Nov 2026 (model), Practice ROI. Inputs are estimates with no data: nothing has been timed and no practice asked. Labour value is not cash unless a practice avoids a hire. Capacity value counts only if it sells the freed hours to new clients.

THE ECONOMICS

On Azerbaijani subscriptions alone, the base case runs out of cash around month 45.

Cash balance, M AZN, from a 1.5M AZN start (a plan; nothing raised)

Month 45

Base cash runs out. It needs 313,736 AZN more within 60 months, and cash is still falling then.

Month 36

Conservative runs out. Only Optimistic stays funded, with first profit in month 25.

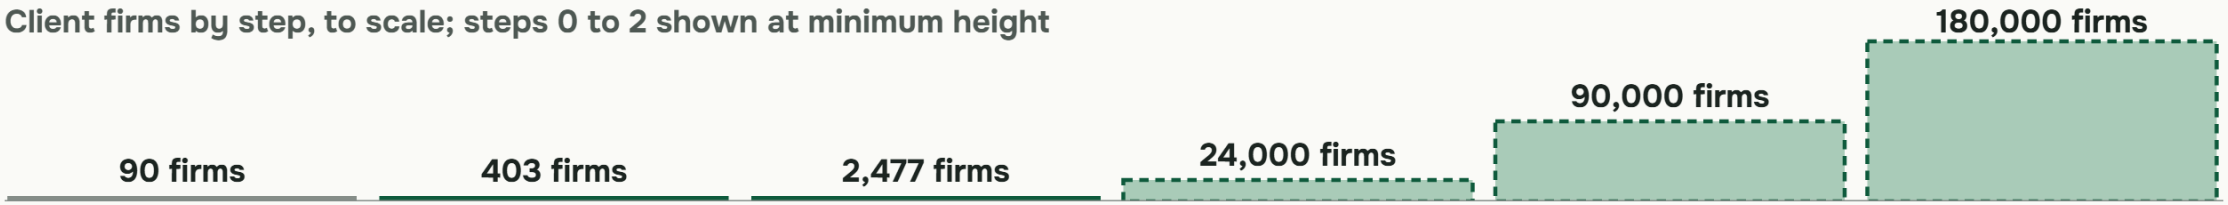

SO WHAT 1.5M AZN carries the Base case to month 45. A further 0.31M AZN is needed by month 60 and $10M by year 5 for step 3.

Source: NowAI financial model, 6 Nov 2026 (model), cash model. Months 37 to 60 hold the year-3 price. Every input is an estimate with no data. Base reaches no operating profit within 60 months. USD at 1.7 AZN: 1.5M AZN is about $0.9M.

THE ECONOMICS

$1B would take six steps, and only the first two come from our model.

Client firms by step, to scale; steps 0 to 2 shown at minimum height

0. Prove it

90 days, team of 3
$0 a year
Nothing yet at 10x

To climb: 200+ receipts read, 3 practices agree to pay

1. Books live

Year 1, team of 5
$41k a year
$0.41M at 10x

To climb: practices renew; entries need few edits

2. Cash added

Year 3, team of 10
$0.44M a year
$4.4M at 10x

To climb: Cash adds revenue; new funding is found

3. Three countries

Year 5, team of 40
$5.9M a year
$59M at 10x

To climb: licensed partner live; a 2nd country in 6 months

4. Five countries

Year 7, team of 120
$31.8M a year
$318M at 10x

To climb: money flow earns as much as subscriptions

5. $1B

Year 10, team of 250
$101.6M a year
$1.02B at 10x

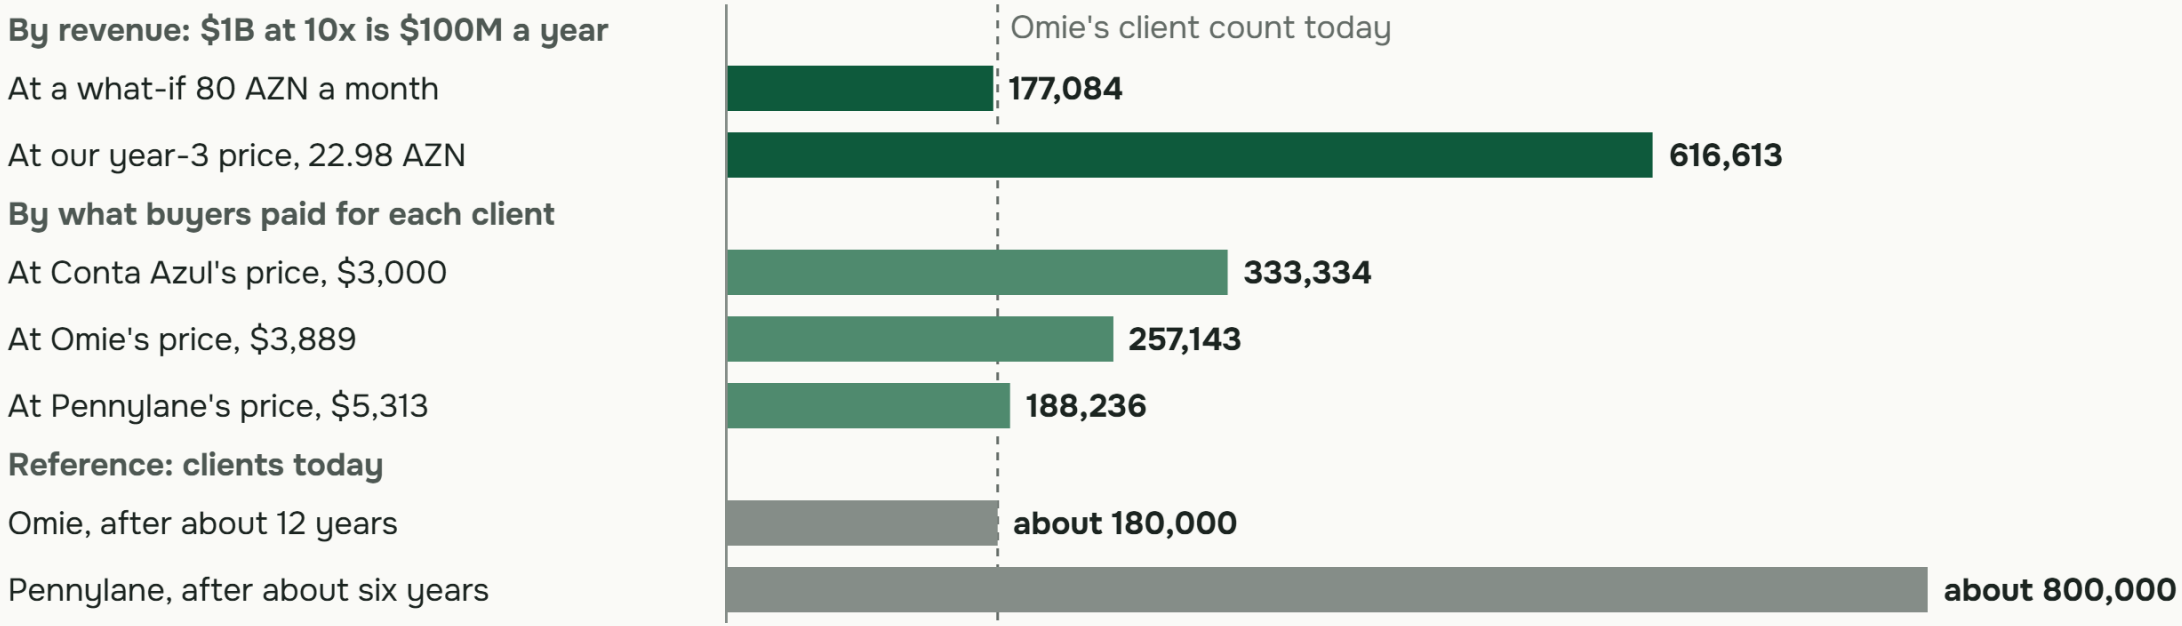

To climb: Pennylane's partners, Omie's revenue per client and client count

> **Read with care.** An illustration of what would have to happen. Steps 1 and 2 are the Base case (model). Steps 3 to 5 are what we would need to believe (target). Team and capital after step 2 are assumptions, and capital of $10M, $50M and $150M is planned and none is raised.

Source: NowAI financial model, 6 Nov 2026 (model for steps 1 and 2; target for steps 3 to 5). All steps assume 30 clients per practice. 10x is not cautious: Omie was valued at about 6x its reported revenue. USD at 1.7 AZN per USD.

THE ECONOMICS

$1B takes 180,000 to 330,000 firms if prices reach what buyers paid, and 616,613 at our year-3 price.

SO WHAT $1B needs more firms than Omie has after about 12 years. Pennylane reached about 800,000 in about six, so it is possible but a long shot. At the planned price the count is 616,613.

Source: NowAI financial model, 6 Nov 2026 (model): Unicorn math and Path to $1B. $1B at 10x revenue is $100M, or 170M AZN, a year at 1.7 AZN per USD. 80 AZN is a what-if price. Omie and Pennylane client counts reported; Omie value pre-money. 10x is not cautious. Bars to scale.

Four of five target countries appear to run on the same rails: an accountant, 1C and an e-invoice.

Country	SMEs	Accounting software	E-invoice	Accountant channel
Azerbaijan	424,437 SMEs (2024)	1C	e-qaimə, signed with ASAN İmza	Practices and 1C dealers; count unknown
Georgia	Unclear; 921,500 in 2023, an upper limit	1C, Business Central, SAP B1	rs.ge tax invoices for VAT payers since 2012	Outsourcing common; many SMEs file themselves
Uzbekistan	1,236,126 small firms (Jul 2026)	1C; cloud 1C just beginning	Phased in; SME dates not found; Didox operator	Outsourcing exists; a state AI tax service
Kazakhstan	About 2.18M operating (Jan 2026)	1C, including cloud 1C	Mandatory for VAT payers; new rules Jan 2026	Outsourced accountants and 1C partners
Türkiye	3,936,542 SMEs (2024)	Logo, Mikro, Zirve, Paraşüt	Mandatory above sales thresholds from Jul 2026	Licensed accountants; already contested

> **Inference.** The first four run on an accountant, 1C and an e-invoice. Türkiye is contested. This is our inference, unproven. Do not add the SME counts: the definitions differ.

Source: NowAI country research, 6 Nov 2026 (reported, 2023 to 2026; stat.gov.kz, stat.uz, OECD, TÜİK via press, rs.ge guidance). Georgia's 2025 count is unknown. The draft order is Georgia, Uzbekistan, Kazakhstan, then Türkiye (estimate).

THE ECONOMICS

Three routes: regional money flow, higher-price markets, or a sale.

1. Regional money flow

Main route. A long shot.

Needs 180,000 or more firms.

Azerbaijan with an assumed money layer reaches 32.29 AZN a client a month. The gap to Omie is 53.57 AZN.

Needs a licensed partner and a written legal answer. NowAI never holds the money.

2. Higher-price markets

A few million dollars a year, at most.

UAE and Saudi Arabia: bookkeeping costs 15 to 70 times more (reported).

Needs native Arabic, a certified e-invoicing provider, a local partner and probably local hosting.

Wafeq, Qoyod, Zoho and OCTA are ahead.

3. A strategic sale

The most likely good outcome.

Visma and Xero have paid for this kind of company.

At Conta Azul's price of $3,000 a client: about $7.4M at 2,477 clients, about $72M at 24,000.

A very good result for the founder, and well below $1B.

SO WHAT The honest range: $1B is the stretch, and a sale is the likely good outcome.

Source: NowAI financial model, 6 Nov 2026 (model and estimate); research on higher-price markets (reported from accountant marketing pages and vendor pages; official rules not read). Sale values are arithmetic at Conta Azul's price per client, not an offer. USD at 1.7 AZN.

Five people to start, ten by year 3, sharing the roles that build the machine.

Roles to cover by year 3	Owns
Technical lead	Architecture, ledger, security, hosting
Two backend engineers	Intake, agent engine, approval queue
Evals and AI engineer	Test set, accuracy, cost per document
Integrations engineer	1C, banks, e-qaimə files, WhatsApp
Front-end engineer	Accountant app and approval screens
Security and infra, part-time	Cloud, backups, access, data protection
Chartered accountant	Rules library, chart-of-accounts templates
Implementation accountants	Client set-up, corrections, test set
Product and design	Accountant workflow, WhatsApp flow, pricing tests
Sales and support lead	Practices, onboarding, incidents, regulators

5 to 10

Ten people in Base at month 36 (5 core plus support and revenue hires); the roles are shared among them.

100+

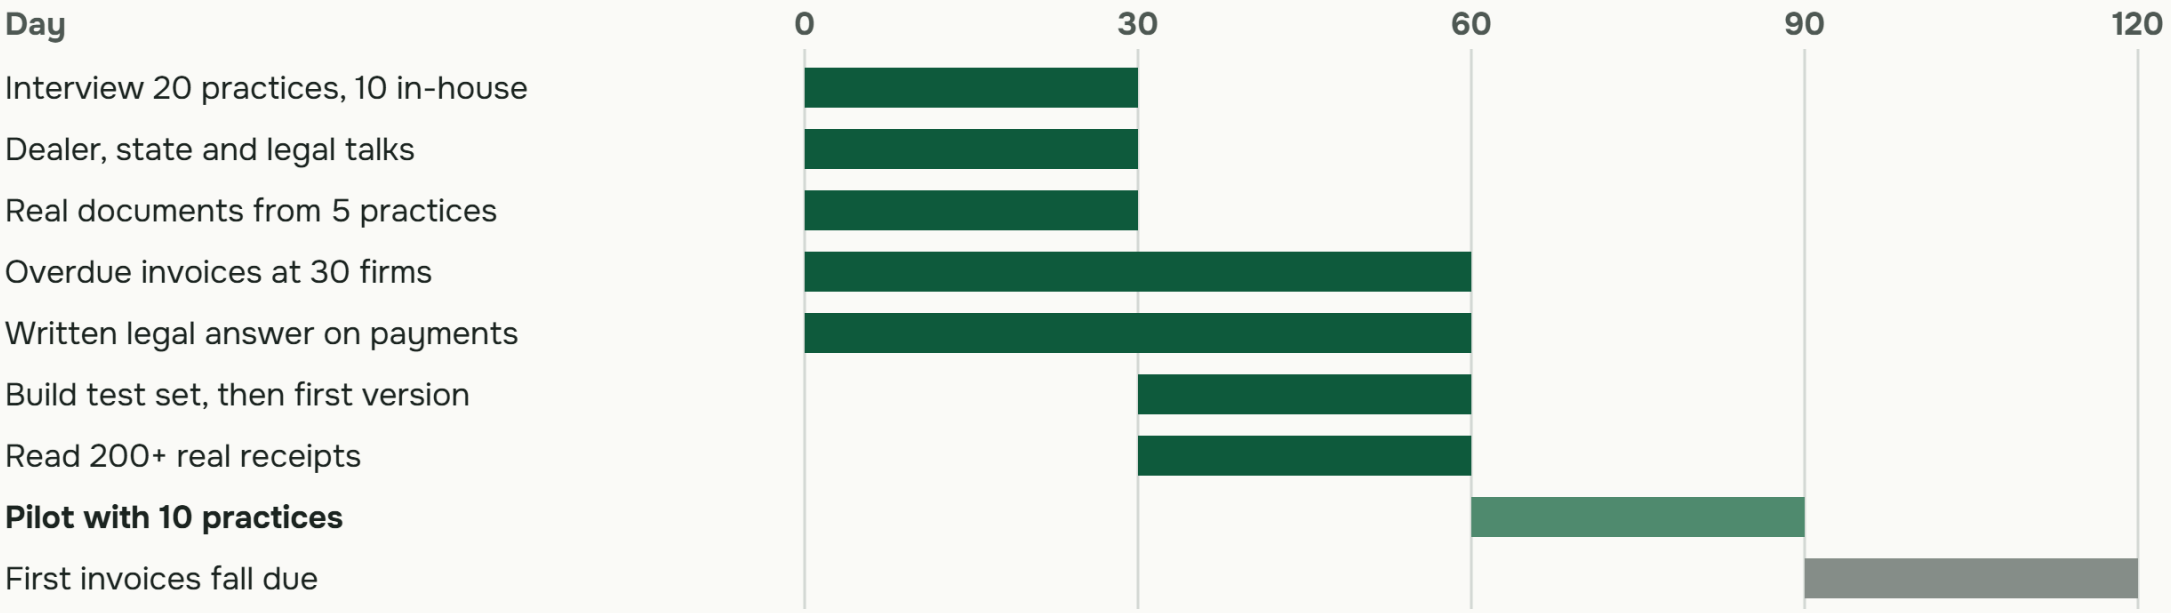

people before $1B (estimate). DataSnipper had about 130 at $1B and Wonderful about 350 at $2B.

Nobody has done this with 10 to 15 people.

Source: NowAI backend design, team ownership; NowAI financial model, 6 Nov 2026 (headcount after 36 months: 10 in Base, model); DataSnipper and Wonderful staff counts as reported (Bloomberg, Fortune). Hiring order and pay are estimates.

THE PLAN

The first 120 days answer the questions that could stop us.

SO WHAT The kill test is one question: do practices pay? Proof is 6 of 10 pilot practices paying. Fewer than 3 of 10 kills it. Signed orders are read on day 90 and cash by about day 120.

Source: NowAI 90-day plan and targets, 6 Nov 2026 (nothing has started and no start date is set). Step 0 of the staircase asks for 200+ receipts read, 30% of client hours saved, three practices agreeing to pay, overdue invoices measured at 30 firms and a written legal answer.

THE PLAN

One test decides most of the risk: do practices pay?

Risk	Why it matters	What would prove us wrong
Practices will not pay	There is no evidence either way	Under 3 of 10 pilot practices pay
The price model is wrong	Only hint, 50 to 150 AZN a firm, breaks it	Practices insist on that flat fee
Too few practices	Break-even needs 189 to 448; count unknown	Fewer practices than break-even needs
The cheap human accountant	Freelancers near 100 AZN cap the price	Practices refuse any per-client fee
Reading fails on local receipts	No Azerbaijani receipt benchmark exists	Low accuracy, or $0.03 to $0.05 a page
Time saved is too small	Base saves 27.9% of hours; the bar is 30%	Timed tests near or under 15%
Cash has no local pain	No Azerbaijani data on late payment	Overdue is small at the 30 firms
No legal route for payments	The money layer needs a licensed partner	The written answer is no
A small ceiling	Azerbaijan ceiling is about $2.4M a year	Investors will not back a regional path

SO WHAT One answer decides most of the rest: do practices pay? Signed orders are read on day 90.

Source: NowAI risk list and kill tests, 6 Nov 2026 (targets, none measured). A kill on payments or overdue invoices stops Cash or the money layer, not Books. Between 3 and 5 of 10 paying means do not scale: fix price or scope and test again.

Sources are listed by topic, and every NowAI number is a model input or a target.

Company figures

Company reports and press, checked 6 Nov 2026. Crunchbase News, 10 Aug 2026. TechCrunch, Business Wire, Bloomberg, Fortune, SiliconANGLE, Xero release and company reports. Labels: confirmed, reported, estimate. One Slash customer count rests on a single outlet.
